*For use in Tension and Compression for Force and Load Measurement*

The DBBSM series of S-Beam load cells are designed for use in tension and compression and lend themselves to both force measurement and weighing applications alike. Typical applications include tensile testing machines, suspended hoppers, geotechnical test equipment and other general purpose applications. Their ease of mounting makes them very attractive for use as a general purpose load cell.

A dual bending beam sensing design is used on all capacities up to 1000kg and a shear web sensing design is used from 2500kg upwards. Versions are also available in lbf and N (kN) ranges. Both the dual bending beam and the shear web design offer high accuracy performance of better than  $\pm 0.03\%$  of the rated capacity.

The DBBSM series is sealed to IP51 as standard but can be enhanced to IP67 for more arduous applications.

If you need to fit into a restricted space try our [DBBSMM range of miniature S-Beam load cells](#) designed to fit where space is limited.

## Rod End Bearings for Tension Use

Maintenance-free rod ends are a complete units made up of a housing with both an integral shank (with an internal or external thread) and a maintenance-free spherical plain bearing, located within the housing.

### Key Features:

- Supports radial loads in a tensile or compressive direction.
- Suitable for unilateral loads - can support alternating loads and alternating loads in combination with bearing GE..UK-2RS, please consult sales.
- Zinc plated for corrosion resistance.
- Are maintenance-free (in bearings with Elgoglide®, lubricant leads to a considerable reduction in bearing life)
- Fitted with radial spherical plain bearings GE..UK or GE..UK-2RS
- Hard chromium/PTFE composite or hard chromium/Elgoglide® sliding contact surfaces.
- Enables compact adjacent construction thanks to its thin walled design of the eye housing.
