VectorPro
Advanced Security Module (ASM)

Introducing the enterprise network storage, integrated security, and compliance features add-on

Essential for manufacturers of safety-critical products, requiring traceable testing and results to support your organisation's **21 CFR Part 11 compliance** requirements.

Part number:
840-470-D

VectorPro standard

Event logging captures actions and changes throughout testing automatically, ensuring traceability and accountability.

Test versioning and modifications provides a complete revision history with comments for tracking changes.

Electronic signatures enable approvals to ensure critical actions are reviewed and authorised by appropriate users.
Security configuration for user permissions, password policies, and system lockout settings, to prevent unauthorised access.

VectorPro ASM features

Microsoft SQL Server support for enhanced data and network security, enabling your teams to maintain VectorPro's database in a familiar and secure enterprise environment.

Data integrity
Prevent users from inadvertently changing test procedures, deleting test samples, batches or other attributes. Backup data via established IT processes.

Microsoft Active Directory (or compatible LDAP directory service) integration enables your organisation to manage all VectorPro users and groups centrally.

Safety
Prevent untrained and unauthorised users from potentially damaging the test system or accidentally harming themselves or others.

VectorPro Advanced Security Module (ASM) is available as a one-time purchase in addition to your testing solution software. ASM enables your organisation to integrate VectorPro testing software with your existing user and data management processes, supporting regulatory compliance best practices.
